

Issue #	User Story Title/Task Title	Description/Associated Tasks	Difficulty Level (0,1,2,3,5,8)	Priority	Risk	Assign	Sprint
#76	Make a mortgage calculator	-create mortgage calculator button -create form requesting loan amount, interest rate and duration -display monthly payment and total payment	6- This task is a little difficult since we need to find the proper formula. But other than that all we need to do is display the results according to the given information	MED	HIGH - part of main function of website.	Christa - Jose - Oviya- Midhurshaan	4
#77	Homebuyer can view newly added properties	-create a section at top of property page with newly added properties -display these properties in a simple, easy to view way	3 - all that needs to be done is adjusting the format of the properties page, and creating a function that will only display the most recently added one	LOW	LOW - this is because this is an extra feature that isn't required and also it does not affect any other component in a major way	Jenisha, Veronique	4
#78	Fixing display for crud operations	- adjusting the displays -adjusting css accordingly	3- We must fix the display and make it look nice, so it matches the rest of our website.	LOW	MED- since it is functional it is okay, but we just need to make it look nice for users	Oviya- Midhurshaan	4
#81	Implementing favourites	- Adding a button to the properties show more page - Adding a favourites section in my account to display the property	7- This will be a hard feature, because we need to connect the database and make sure it implements every time at login. This is something new we have not learned yet.	LOW	MED- It is a core feature we need to implement, however it is not of high priority	Christa - Jose - Oviya- Midhurshaan	4
